1. WHAT IS TOYD?

TOYD or 'Text On Your Desktop' is an application used to show a running text on your desktop. You can write your favorite quotes to be shown.

The history of why this application born was started on late March 12, 2008. At the time, I was stuck in front of my computer, doing my thesis (to raise scholar degree in communication science). Around my boarding room, already full with paper which written my favorite quotes on it. I think, how if my computer do the same way? To give me spirit and remind me to do something best?

After spending a few time, working with Microsoft Visual Basic 6, the initial version of TOYD was born, with no additional features and the text can't be changed from a 'configuration form' as embedded in this version of TOYD. Day after day, this application improved, over and over. This version maybe not the latest version, because I'll do my best to make TOYD always looks better than before.

2. LICENSE AND AGREEMENT

TOYD is a FREWARE. It means that you may use, copy, and or distribute it freely as long as not for commercial purposes and as long as in its original package.

You may not do such a reverse engineering on it (decompiling, debugging, disassembling, hex and resource changing, etc). If you like, you may obtain its source code by sending a request to the author's e-mail.

Use TOYD at your own risk! The author will have no responsibility on any damages, troubles, and or data loss caused be the use/misuse of this application. The author also will not give any kind of support related to this application. The only guarantee given by the author is this application does not contain any adware, spyware, virus, trojan, worm or any kind of malicious code. It also does not build up internet connections in the background and does not transfer any data.

3. HOW TO USE?

Before you start, make sure that you already install and register 'COMDLG32.OCX' on your computer. If not yet, you can simply execute 'regcomdlg32.bat' in the same package with TOYD. The script will copy and automatically register COMDLG32.OCX into your Windows System folder.

As you all know, my philosophy is: "simplicity". That also applied on most of my self creation software, TOYD too. So, I'm sure that you know how to use it since the first time of use :) As a clue, all the configuration is laying in the system tray icon/menu.

The tray icon will look like this:

Right click on the system tray icon to pop up the menu. The pop up menu will look like this:

There were 5 menu there: 'Configure TOYD...', 'Visit <http://xvader.blogspot.com>', 'Register TOYD...', 'About TOYD', and 'Exit TOYD'.

The 'Configure TOYD...' menu held a command to show the configuration form. The configuration form will look like this:

As you see, there were some configuration function, 'Text to show', 'Scrolling speed', and 'Miscellaneous'. Each form elements (command button, checkbox, scroll bar, text box, etc) has a detailed tooltip text when you stop your mouse pointer on it and wait for a while.

The 'Text to show' section is the place where you can add/remove your favorite quotes to be shown on your desktop. You can also move selected quote up or down, depends on yours. Please note, the upper text will be shown first than the lower text. There's also ☹ and 🗑 icon. The ☹ used to remove selected text and the 🗑 icon used to completely clear the list box.

You can change the text scrolling speed on the 'Scrolling speed' section. There were 5 scrolling speeds available.

Customize the font? No matter how. Simply click on the 'Customize' button in the 'Font' section. There, you can change the font type, bold, italic, strikethru, underline, size, and color. You can also see the preview before pressing the 'OK' button on the 'Configure TOYD' form.

The 'Miscellaneous' section contains 3 function. 'Always on top' to make the TOYD scrolled text will be shown on top of all other windows. 'Start with Windows' to automatically start TOYD when Windows started. And, 'Allow multiple instance' to choose whether TOYD can be run more than once at a time or not. Please note, if you configure one TOYD instance, the other TOYD instance will use the same configuration too. You can't use different configuration for each TOYD instance.

In the pop up menu, you will also see 'Visit <http://xvader.blogspot.com>' to visit the author's blog, 'Register TOYD...' to register your copy of TOYD (will be explained further in the '[How to register your copy of TOYD](#)' section), 'About TOYD' to show about box, and 'Exit TOYD' to completely unload TOYD from running on your desktop.

4. HOW TO REGISTER YOUR COPY OF TOYD?

First of all, write down your 'Computer code'. The computer code can be seen in the 'Register TOYD' window. Right click on the TOYD system tray icon and point to 'Register TOYD...'. Please note, the computer code is different from other computer. So, to register TOYD on many computer, you must write down each computer code from all the computer you wish the TOYD to be registered with.

Then, simply send an e-mail with subject: 'TOYD registration'. Don't forget to write your 'Name' (licensee), 'TOYD version', and your 'Computer code' in the e-mail. When finish,

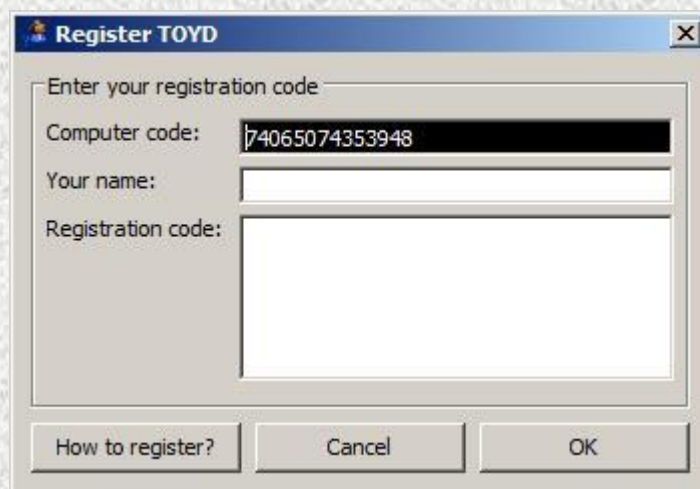

send the e-mail to: 'fadly87@gmail.com'. The registration code will be sent to you in a few day after the e-mail received by me. The registration cost is \$0/IDR.0.

By registering your copy of TOYD, it means that you give me spirit to make TOYD better than before.

Please note: this registration procedure was created to get feedback from the user and to know how respect they are.

It not a must to register your copy of TOYD. You may use TOYD freely as noted on the '[License and agreement](#)' section, whether you are registered or not, without any kind of application feature limitation.

After you received the registration code from the author, you can right click again on the TOYD system tray icon and point to 'Register TOYD...'

A 'Register TOYD' window will show up. There, you can fill in the 'Your name' (the name you write down in the e-mail, together with 'Computer code' and 'TOYD version') and 'Registration code'. If you enter the correct registration code, a message box indicated successful registration process will show up.

Please note, the registration code you've got can't be used on other computer. Because of the uniqueness of the computer code.

After registering, the system tray icon pop up menu will look like this:

The 'Register TOYD...' replaced with 'Registered to: Your Name' and it will no longer available for click. The about box too, will be changed, to show you the appreciation for relaxing your time to register your copy of TOYD 😊

5. HOW TO SUPPORT THE AUTHOR?

- ❖ Registering your copy of TOYD (Text On Your Desktop).
- ❖ Reporting found bugs in this version of TOYD to the author.
- ❖ Contributing on the author's other project.
- ❖ Spreading the author's software.
- ❖ Sending a few bucks to the author (via PayPal or Mail). If you prefer to donate via PayPal, simply open the author's blog, at the right side, click on "Donate Me" button. Else, you can contact the author via e-mail if you like to donate via Mail.
- ❖ Visiting the author's blog periodically.
- ❖ If you have a website/blog, you may place a link to the author's blog.
- ❖ Giving the author a webhosting and domain name (contact the author for details).
- ❖ Sending the author any kind of great books (contact the author for details).
- ❖ Any other option? Contact the author for details :)

6. CREDITS AND GREETINGS

The author would like giving credits and greets to the following people:

- ❖ My lord Allah and prophet Muhammad.
- ❖ My parents.
- ❖ My brother and sister.

- ❖ Mezfi Yunita :)
- ❖ My bandmates (Rio, Budi, Groho', Acep, Dayat).
- ❖ My friends at Palembang and Bandar Lampung (Toni Rahadiyanto, Hendrik Ahirawandi, Novan, Angga Riadie, Ferta Pramita, Juliano Saputra, AND ALL).
- ❖ My friends at Communication Science, University of Lampung, especially 2004 (Fajar, Arphie, Mizan, Syawal, Dipi, Sherry, Miu, Devi, Nida, Kris, Anom, Gito, Faria, Jaka, Ipul, Rife, Eko, Dafi, Farah, Lian, Dewi, Nandra, Kak Dias, Andi, Linda, Yetti, Ika, Dian, Wiwit, AND ALL).
- ❖ My friends at Kopi 15 (Dedi, Vani, Ferdi, Anto, Nanang, Andi, Bidin, Bang Bus, Rika, Deni, Riza, AND ALL).
- ❖ My friends at WongKito.net (rd, jafis, rajaiblis, Aan, Eriek, Au', Ranny, Nike, Triana, Ferdi, Awank, Yohanes, Amalia, Ivan, Wahyu, M. Novan, AND ALL).
- ❖ My friends at the blogosphere.
- ❖ BlogFam.com.
- ❖ My friends at Yahoo! Messenger.
- ❖ Everyone who know me, and everyone who I know...
- ❖ You...

7. CONTACTS

You may contact the author by the following way:

E-mail: fadly87@gmail.com

Blog: <http://xvader.blogspot.com>

The author wish to move his blog to <http://www.idrusnetzone.com> but not yet ready. If you like to give the author a webhosting and the domain name, a great thanks and appreciation will be given to you ☺

8. CHANGE LOG

Version 1.2

- ❖ RELEASE DATE: March 31, 2008
- ❖ ADDED: scrolling speed option (5 speed available).
